FireSafe Nozzles and Cannula Valves automatically arrest oxygen flow in the event of a cannula fire and limit any damage or injury to life that may result from an oxygen fire. FireSafe Nozzles are designed to fit existing hospital flowmeters, they replace existing nozzles and will not impede the normal gas flow. FireSafe Cannula Valves are designed to fit various connectors and 5mm ID tubing.

### Features
- Controls the severity of fires associated with oxygen therapy
- Slows the rate of a fire developing
- Automatically isolates the oxygen supply
- Minimal cost investment with maximum potential
- Reducing risk, protecting life

### Benefits
- Reduces the risk and impact of an accidental oxygen fire. Increases the chance a fire will extinguish itself.
- Reduce the rate at which the fire spreads and the potential impact on other patients, healthcare workers and emergency service personnel
- Prevents the fire reaching high pressure oxygen pipeline systems, cylinders and oxygen concentrators
- Minimises the size of the fire and the cost of restoration
- Buys valuable time to evacuate people from the scene

### Specifications

#### FireSafe Nozzle
- Maximum Flow: 25 lpm
- Minimum Flow: 0.5 lpm
- Operating/Storage Temp: -20°C to +60°C
- Shelf Life: 8 Years
- Compatibility: 9/16" UNF (DISS) Female

#### FireSafe Cannula Valve
- Maximum Flow: 20 lpm
- Minimum Flow: 0.5 lpm
- Operating/Storage Temp: -20°C to +60°C
- Shelf Life: 4 Years

Manufacturer
BPR Medical

Quality Assurance
This device conforms to the following standards:
- ISO 13485: Medical devices – Quality management systems – Requirements for regulatory purposes
- EN 13544.2: Respiratory Therapy Equipment
- MDD/93/42/EEC Medical CE 0459

FireSafe Nozzle
Part Number 827-0031  AUST. AND N.Z.
Pack of 10

FireSafe Cannula Valve
Part Number 827-0002  AUST. AND N.Z.
Pack of 10
