

LIFE LINE™

Emergency Oxygen Resuscitation kit.

This includes:

- Equipment for resuscitation, equipment for maintaining airway (for children and adults), equipment to assist ventilation (including bag and mask), IV access, and emergency medicines
- Oxygen

LIFE LINE™ is a comprehensive emergency oxygen resuscitation kit.

Features and benefits

- Unique INHALO® cylinder with integrated valve, regulator and flowmeter
- Neither purchase, nor annual service of oxygen regulator required
- Safe and easy to use modules based on training level of first aider
- Fully portable bag with waterproof backing and back straps
- Fast delivery of medical oxygen refill and module replenishments
- Ideal for display at emergency point with optional wall mount and safety signage
- Large window display on the LIFE LINE™ bag to allow medical oxygen content to be viewed at all times without opening the bag

LIFE LINE™ comes with a waterproof backing and backpack straps allowing ease of use during an emergency.

LIFE LINE™ Standard Module
Product Code: LLMOD1

LIFE LINE™ Professional Module
Product Code: LLMOD2

Safe and easy to use modules based on training level of first aider.

Optional Wall Bracket
Product Code: LLBRC

LIFE LINE™ can be supplied with an optional wall mount, that is ideal for display at the emergency point of your premises.

Large window display on the LIFE LINE™ bag.

BOC is a member of the Linde Group, a global healthcare company dedicated to providing products, therapies and services to hospitals, clinics, nursing facilities, emergency departments and homecare providers around the world.

With over a century of working closely with our customers, we have established a solid foundation as a healthcare partner with medical gas expertise. We are present in 70 countries around the world, working to ensure our solutions are always delivered and serviced to the highest possible standards of quality, efficacy and safety. We combine a unique knowledge of healthcare realities with continuous research and development.

LIFE LINE™

Saving minutes, saves lives.

BOC: Living healthcare

Saving minutes, saves lives.

Modern and easy to use resuscitation equipment is helping more people than ever to survive medical emergencies such as cardiac arrest. Although these events are relatively rare, they can happen at any time so it is vital to be prepared.

The LIFE LINE™ emergency oxygen resuscitation kit is designed not just for use by medical professionals such as doctors and dentists but also by appropriately trained first aid personnel in the work place and community.

LIFE LINE™ from BOC Healthcare allows first aiders to administer oxygen during CPR while waiting for an ambulance to arrive. It is also designed to provide initial treatment for conscious patients during medical emergencies.

All-in-one solution for emergency oxygen resuscitation.

LIFE LINE™ emergency resuscitation kit is contained in a purpose-made backpack style carry case for easy transportation to the casualty.

A selection of oxygen masks and other resuscitation equipment is packed in a modular system, based on the level of training of the first aider.

The standard module contains basic resuscitation equipment, while the professional module is suitable for use by advanced first aiders. Replenishment modules can be ordered separately.

LIFE LINE™ contains a uniquely designed oxygen cylinder with an integrated regulator and flow meter. Oxygen can be delivered at between 1 and 15 litres per minute, providing up to 37 minutes of treatment at the highest flow rate. This helps to prevent the patient deteriorating prior to the arrival of professional medical assistance.

When every second counts.

LIFE LINE™ contains the revolutionary INHALO®, featuring a high volume gas package with integrated valve, regulator & flowmeter.

INHALO® features and benefits

- The high gas content (560 litres) of the INHALO® means significantly more gas than a standard A sized medical oxygen cylinder, buying you more time during an emergency
- Integrated valve, regulator & flowmeter eliminates the need for a separate regulator and flowmeter
- Simple easy-to-use design offers a faster response time during an emergency as the INHALO® eliminates the need for attaching external regulators, and flowmeters, saving precious time
- INHALO® is wholly maintained by BOC Healthcare saving on costly equipment purchase & ongoing maintenance
- A wide selection of accurate flow settings (1-15 lpm) provides for a wide range of oxygen therapies
- Live contents gauge provides instant clear indication of gas level at all times, even when the cylinder is turned off
- Allows multiple therapies from the same cylinder, e.g. oxygen supply &/or suction device (from pressure outlet)

Oxygen refills

BOC Healthcare's dedicated Customer Service Team provides fast reordering of INHALO® refills over the phone. Alternatively, you can order refills online via our webshop, for delivery in metropolitan areas.

INHALO®: A safer, faster and more convenient medical oxygen solution

- Designed to make cylinder operation and medical oxygen administration easier for healthcare staff
- No complex set-up or unnecessary manual handling as there is no need to attach a separate regulator and flowmeter
- Oxygen therapy can be started right away with the INHALO® plug & go functionality
- Easier and safer to handle than conventional cylinders
